## Abstract

## Background

The checklist of British and Irish aculeate Hymenoptera (Apoidea, Chryridoidea and Vespoidea) is revised. Species distribution is summarised for all species at the level of country (England, Scotland, Wales, Ireland and Isle of Man).

## New information

The 601 native species represent an increase of 25 on the 1978 checklist, comprising mostly new discoveries. This increase is nearly balanced by the 23 species now presumed to be extinct in Britain and Ireland.

## Keywords

Britain, Ireland, bees, ants, wasps, fauna

## Introduction

The checklist of British and Irish aculeates is essentially that of Else et al. (2004) but with several additions and updated taxonomy. This continues the series of chapters, starting with Broad and Livermore (2014a), Broad and Livermore (2014b) and Liston et al. (2014) comprising the first complete updating of the 1978 Hymenoptera checklist (Fitton et al. 1978).

Unlike most groups of Hymenoptera, the aculeate ants, bees and wasps are well-served by identification literature and are actively collected and recorded by a relatively large number of amateur as well as professional entomologists. We thus have a better idea of the actual size of the fauna than we do for sawflies and parasitoid wasps. There is thus a much better idea of change in the aculeate fauna and numerous extinctions and colonisations have been documented.

The aculeate Hymenoptera encompass three superfamilies and 18 families in Britain and Ireland (as discussed in Broad 2014, this figure is likely to change), with a wide range of ecologies and body forms. Figs 1, 2, 3, 4, 5, 6 depict some of this variety (and the website of the [Bees, Wasps and Ants Recording Society](#) has many more images). With multiple evolutions of eusociality, importance as pollinators, predators and parasitoids and general conspicuousness, the aculeates have always attracted attention and very good summaries of their biology can be found in a diverse array of texts for a variety of different audiences, from Lubbock (1882) to Gauld and Bolton (1988).

## Materials and methods

The rationale and background to the updated Hymenoptera checklist are laid out in Broad (2014). The aim is to account for all the names in the 1978 checklist, document all additions to and deletions from that list and to list the distributions of all species at the country level, i.e. England, Scotland, Wales, Ireland (as one unit) and the Isle of Man. We do not usually report distribution data for introduced species that only reproduce indoors or in greenhouses.

b: *Chrysis viridula* Linnaeus (Chrysididae) female (courtesy of J. Early)

c: *Dryinus collaris* (Linnaeus) (Dryinidae) female (courtesy of J. Early)

Sources of classification are listed under each superfamily. The checklist of bees is essentially similar to that of Else's (in prep.) handbook to the British fauna, except that we employ six families rather than including all bees in Apidae and, as discussed in the introduction to this checklist series (Broad 2014), we do not consider the fauna of the Channel Islands. We adopt a multi-family classification of the bees to maintain unity with larger-scale checklists (particularly that of M. Kuhlmann's [Checklist of the Western Palaearctic Bees](#)) and because this is the system employed in the most authoritative treatise on bee classification (Michener 2007), as well as most recent papers dealing with bee phylogeny.

d: *Ceropales maculata* (Fabricius) (Pompilidae) female (courtesy of J. Early)

Country-level distribution data mostly derive from the distribution atlases produced by the Bees, Wasps and Ants Recording Society (Edwards 1997, Edwards 1998, Edwards and Telfer 2001, Edwards and Telfer 2002, Edwards and Broad 2005, Edwards and Broad 2006, Edwards and Roy 2009, Collins and Roy 2012, with maps updated on their [website](#)), the catalogue of Irish Hymenoptera (O'Connor et al. 2009), and some additional literature references. Note that the Bethylidae, Dryinidae and Embolemidae are particularly poorly recorded.

## Apoidea

### Superfamily APOIDEA Latreille, 1802

**Notes:** The higher-level classification of the Apoidea follows Pulawski (2013) Engel (2005) and M. Kuhlmann's [online checklist of Western Palaearctic bees](#). The 'traditional' family Sphecidae is paraphyletic with respect to the bee families (here referred to as the Anthophila, an informal taxon, following Engel 2005) and in Britain and Ireland comprises the families Crabronidae and Sphecidae. Species-level classification of Crabronidae and Sphecidae follows Pulawski (2013). Figs 1, 2: habitus of selected British Apoidea.

## Subfamily Chrysidinae Latreille, 1802

**Notes:** Some distribution data from Morgan (1984).

### Tribe Chrysidini Latreille, 1802

#### Genus *Chrysis* Linnaeus, 1761

**Notes:** The number of species recognised in the *Chrysis ignita* group has varied from author to author. Soon et al. (2014) analysed species limits and found there to be 15 described European species plus cryptic species, a result more in line with Morgan's (Morgan 1984) recognition of multiple species than, for example, Kunz's (Kunz 1994) much more conservative treatment.

###### Nomenclature:

*Formica megacephala* Fabricius, 1793

*edax* (Forskål, 1775, *Formica*)

*trinodis* (Losana, 1834, *Myrmica*)

*pusilla* (Heer, 1852, *Oecophthora*)

*laevigata* (Smith, 1855, *Myrmica*)

*agilis* (Smith, 1857, *Myrmica*)

*testacea* (Smith, 1858, *Atta*)

*janus* Smith, 1858

*suspicosa* (Smith, 1859, *Myrmica*)

*laevigata* Mayr, 1862

*perniciosa* (Gerstäcker, 1862, *Oecophthora*)

*picata* Forel, 1891

*scabrior* Forel, 1891

*gietleni* Forel, 1905

*bernhardae* Emery, 1915

**Notes:** A tramp species, in the past regarded as a proper introduction in Britain but no established colonies have been reported in the period 1970–present. On a world-wide scale its importance as a tramp species seems to be diminishing. The origin of *megacephala* is certainly Afrotropical as it is a member of a large and successful species group that is otherwise confined to that region.

**Tribe Crematogastrini Forel, 1893****Genus # *Cardiocondyla* Emery, 1869**

**Notes:** *Cardiocondyla britteni* Crawley, 1920 was described from a worker casually introduced in Britain; included here only because the type-locality is Britain.

**Genus # *Crematogaster* Lund, 1831**

**Notes:** *Crematogaster scutellaris* (Olivier, 1792, *Formica*) is an occasional accidental import with cork from southern Europe. It has never established in Britain and, with the decrease in the cork trade, imports of this species will probably become even rarer.

**Genus *Formicoxenus* Mayr, 1855****Nomenclature:**

*SYMMYRMICA* Wheeler, 1904

***Formicoxenus nitidulus* (Nylander, 1846)****Nomenclature:**

*Myrmica nitidula* Nylander, 1846

*laeviuscula* (Förster, 1850, *Myrmica*)

*picea* (Wasmann, 1906, *Leptothorax*)

**Distribution:** England, Scotland**Genus *Leptothorax* Mayr, 1855****Nomenclature:**

*DORONOMYRMEX* Kutter, 1945

*MYCHOTHORAX* Ruzsky, 1904

**Notes:** Many species previously placed in *Leptothorax* have been transferred to *Tennothorax* by Bolton (2003).

***Leptothorax acervorum* (Fabricius, 1793)****Nomenclature:**

*Formica acervorum* Fabricius, 1793

*lacteipennis* (Zetterstedt, 1838, *Myrmica*)

*nigrescens* Ruzsky, 1905

*superus* Ruzsky, 1905

*kamtschaticum* Ruzsky, 1920

*orientalis* (Kuznetsov-Ugamsky, 1928, *Mychothorax*)

**Distribution:** England, Scotland, Wales, Ireland, Isle of Man

### Genus *Myrmecina* Curtis, 1829

**Nomenclature:**

*ARCHAEOMYRMEX* Mann, 1921

### *Myrmecina graminicola* (Latreille, 1802)

**Nomenclature:**

*Formica graminicola* Latreille, 1802

- Stenamma albipennis* Curtis, 1854  
*tuberum* misident.; Orledge (1998)  
*tuberointerruptus* (Bondroit, 1918, *Leptothorax*)

**Distribution:** England, Wales

***Temnothorax interruptus* (Schenck, 1852)****Nomenclature:**

- Myrmica interrupta* Schenck, 1852  
*simpliciuscula* (Nylander, 1856, *Myrmica*)  
*tuberoaffinis* (Bondroit, 1918, *Leptothorax*)

**Distribution:** England

***Temnothorax nylanderi* (Foerster, 1850)****Nomenclature:**

- Myrmica nylanderi* Foerster, 1850  
*cingulata* (Schenck, 1852, *Myrmica*)  
*nylanderocorticalis* (Forel, 1874, *Leptothorax*)  
*nylanderotuberum* (Ruzsky, 1902, *Leptothorax*)

**Distribution:** England, Wales

**# *Temnothorax unifasciatus* (Latreille, 1798)**

**Nomenclature:**

- Formica unifasciata* Latreille, 1798  
*anoplogynus* (Emery, 1869, *Leptothorax*)  
*unifasciatointerruptus* (Forel, 1874, *Leptothorax*)  
*kirillovi* (Ruzsky, 1905, *Leptothorax*)  
*brauneri* (Karavaiev, 1937, *Leptothorax*)  
*salina* (Karavaiev, 1937, *Leptothorax*)  
*ucrainicus* (Arnol'di, 1977, *Leptothorax*)

**Distribution:** England

**Notes:** Recorded from England as an accidental introduction by Fox (2011).

**Genus *Tetramorium* Mayr, 1855**

**Nomenclature:**

- TETROGMUS* Roger, 1857  
*ANERGATES* Forel, 1874  
*XIPHOMYRMEX* Forel, 1887

*sexincta* (Panzer, 1799, *Vespa*)

**Distribution:** England, Scotland, Wales, Ireland, Isle of Man

## **Acknowledgements**

We are especially grateful to Jeremy Early for enlivening the checklist with so many lovely photographs of aculeates. Thanks also to Phil Adams for some additional, excellent photos. Paul Williams, Mike Edwards and Michael Kuhlmann have given helpful advice on apoid classification and nomenclature. Natalie Dale-Skey very kindly created the import spreadsheets from Word documents.

## **Author contributions**

GE compiled an earlier version of this checklist and revised the current list of bees. BB compiled the checklist of ants, Formicidae. GRB updated all sections, added distribution data and edited the paper.
